

Diva Bug: Regaining Keyboard Control After Diva Locks It Out

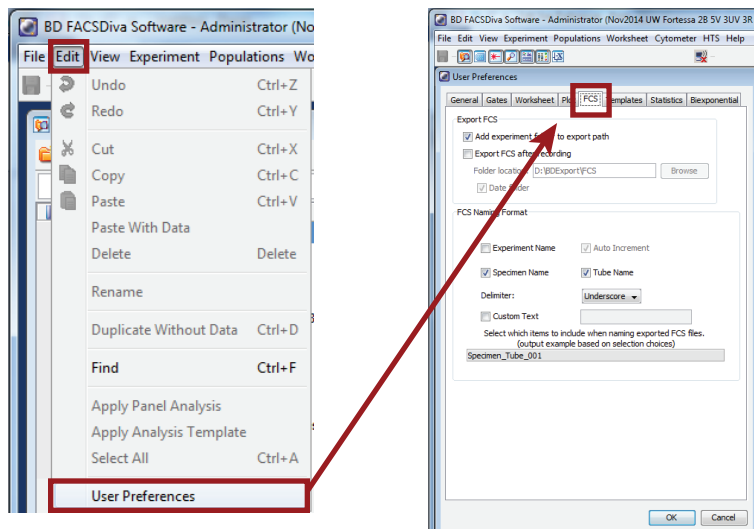

The Bug

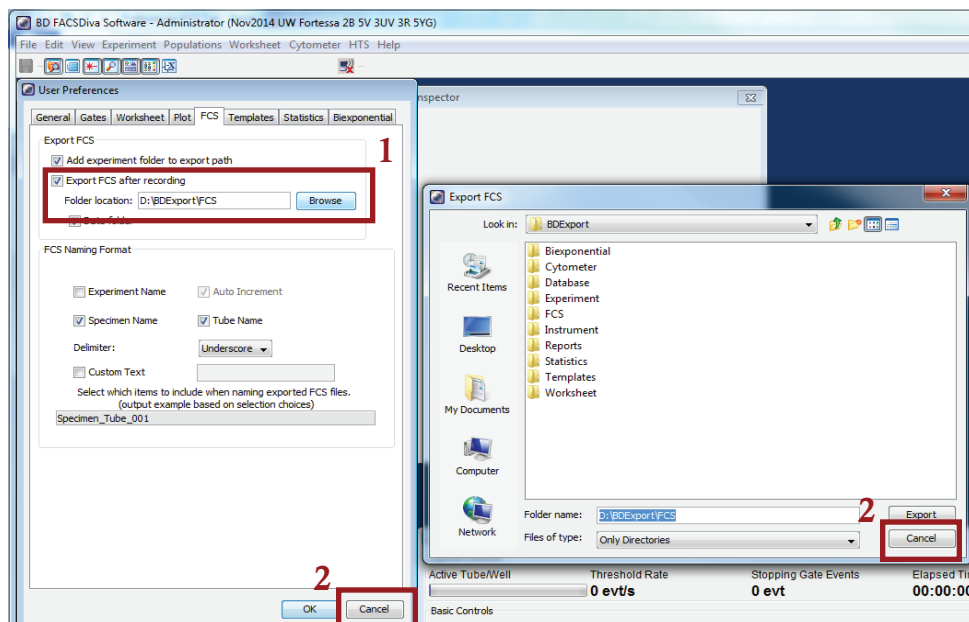

Periodically, Diva will stop accepting input from the keyboard. If the mouse is working but you cannot type to annotate your data, please try the following method to regain control before assuming the keyboard is broken.

The Fix

Click on **Edit** in the top Diva menu bar and choose **User Preferences**. This will open up a new window with options, choose the **FCS** tab.

Check the box next to **Export FCS after recording**, then click the **Browse** button. **Cancel** out of both the **Browse** window and the **User Preferences** window. Keyboard control should be restored.

FAQ

Does this really work?

Yes.

Really? Why?

Yes, really. We have no idea why. It doesn't make sense to us either.
